Abstract (Basic): US 20010044811 A1

NOVELTY - A data model of the legacy computer system application is generated. The model is mapped to an extensible mark up language (XML) schema. The applications of the legacy system are automatically modified and are run so that data written in document object model is output in XML format.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Data delivery system;
- (b) Data outputting system;
- (c) Data outputting method;
- (d) Legacy computer system modeling method;
- (e) Legacy computer system modeling system

USE - For outputting data from legacy computer system used in enterprise application integration (EAI), electronic bill presentation and payment (EBPP), archival of billing statements in business intelligence, etc.

ADVANTAGE - Direct generation of XML formatted data reduces friction in information networks, reduces cost of tracking information, reduces time associated with obtaining business intelligence. Customers can automatically analyze their suppliers for vendor relationship management, suppliers can automatically analyze their customers for customer relationship management and manufacturers can automatically analyze markets for their products for market intelligence by making data available in semantically meaningful form.

DESCRIPTION OF DRAWING(S) - The figure shows the flowchart of the generation of modified legacy program applications to output XML data.
